

Logistics Application Suite

Connect to a vast carrier network to plan, book, ship and track

Today, moving goods and materials from one point to another requires a well-planned strategy and careful coordination from planning to execution. Efficient, agile networks call for fast, intuitive and easy-to-use execution tools, whether an organization uses ocean, air, rail, road or a combination of these. By planning, executing and tracking multimode shipments on a single platform, companies can centralize and standardize their processes, optimize shipping costs and deliver superior customer service.

Moving Goods With Efficiency

Shipping capacity limits, higher costs, demands for faster distribution and the need for real-time visibility are making transportation management more critical now than ever. Based on the most robust consolidated platform for planning and executing global transportation across all modes, e2open's Logistics Application suite has been proven to help companies ship goods faster while reducing costs and risks. Shippers can plan their

transportation needs, book capacity, track progress in real time and ensure invoice accuracy, all from one sophisticated transportation management system (TMS).

Meeting Every Need With a Single Logistics Platform

Now companies of any size can manage all aspects of transportation planning, optimization, booking, tracking and payment processing on one platform. Cross-functional, cross-enterprise and cross-ecosystem integration helps shippers respond to challenges and remove silos. Control tower capabilities move business leaders from basic track-and-trace to a deeper understanding of how missed milestones will impact the business and what corrective actions to take.

Connecting Domestic and International Providers

Companies using e2open's applications gain access to the industry's largest community of ocean, air, rail, truck and parcel carriers, in addition to freight forwarders and many leading logistics service providers. More than 25% of global ocean trade is moved annually on the e2open platform. The network also includes 61,000 suppliers and contract manufacturers for electronic collaboration. These existing connections reduce the need to invest time and money to integrate with new carriers for additional modes or regions.

“E2open has enabled us to differentiate our logistics services with a powerful solution that has significantly improved customer satisfaction and contributed to growing our business internationally.”

Global Logistics Provider

Applications

Transportation Forecasting

Plan transportation with the same sophistication as finished goods, incorporating promotional and seasonal sales surges by accurately forecasting your logistics needs.

Logistics Visibility

Real-time location visibility into every shipment across all modes, legs, and regions helps identify potential disruptions, understand their impact, and act quickly.

Global Logistics Orchestration

Real-time visibility into shipments is just the beginning. Understand the impact of delays on downstream operations and put decisions into action — all from one place.

Transportation Management

Simplify and optimize logistics activities with a single application for planning, carrier procurement, execution, and settlement — across all modes and regions.

Global Parcel

Ship and track packages across the globe with a single integrated platform for labels, manifesting and tracking, selecting the optimal carrier and service.

Bookings

Handle all shipment bookings directly and connect with multiple carriers using a single consolidated platform with access to the industry's largest carrier network.

Audit and Settlement

Take the complexity out of carrier contracts and lower logistics costs by automatically comparing carrier invoices with contracts and identifying discrepancies before you pay.

Vehicle Routing and Scheduling

Automate your planning, loading, and routing processes, optimize driver-vehicle utilization and improve on-time delivery performance to increase client satisfaction.

Equipment Management

Minimize equipment handling and costs. Improve efficiency by eliminating empty runs and port wait times as you lower your carbon footprint.

About e2open

E2open is the connected supply chain software platform that enables the world's largest companies to transform the way they make, move, and sell goods and services. With the broadest cloud-native global platform purpose-built for modern supply chains, e2open connects more than 400,000 manufacturing, logistics, channel, and distribution partners as one multi-enterprise network tracking over 12 billion transactions annually. Our SaaS platform anticipates disruptions and opportunities to help companies improve efficiency, reduce waste, and operate sustainably. Moving as one.™ Learn More: www.e2open.com.
